

Scan Summary: Giltbyte
Target: [REDACTED]
13 January 2024

All clear

No issues were discovered that could lead to or increase the chances of a breach. While this is a good position to be in today, new weaknesses are discovered daily, and changes are often made to systems that could reduce their security. Make sure to continue using ongoing security services to monitor your risk.

What we checked

Total checks
13,023

Targets
1

Issues discovered
0

Here are some examples of what we checked your targets and their reachable webpages for.

Vulnerable software & hardware

- Web servers, e.g. Apache, Nginx
- Mail servers, e.g. Exim
- Development software, e.g. PHP
- Network monitoring software, e.g. Zabbix, Nagios
- Networking systems, e.g. Cisco ASA
- Content management systems, e.g. Drupal, Wordpress
- Other well-known weaknesses, e.g. 'Log4Shell' and 'Shellshock'

Attack Surface Reduction

Our service is designed to help you reduce your attack surface and identify systems and software which do not need to be exposed to the Internet, such as:

- Publicly exposed databases
- Administrative interfaces
- Sensitive services, e.g. SMB
- Network monitoring software

Encryption weaknesses

Weaknesses in SSL/TLS implementations, such as:

- 'Heartbleed', 'CRIME', 'BEAST' and 'ROBOT'
- Weak encryption ciphers & protocols
- SSL certificate misconfigurations
- Unencrypted services such as FTP

Web Application Vulnerabilities

- Checks for multiple OWASP Top Ten issues
- SQL injection
- Cross-site scripting (XSS)
- XML external entity (XXE) injection
- Local/remote file inclusion
- Web server misconfigurations
- Directory/path traversal, directory listing & unintentionally exposed content

Information Leakage

Checks for information which your systems are reporting to end-users which should remain private. This information includes data which could be used to assist in the mounting of further attacks, such as:

- Local directory path information
- Internal IP Addresses

Common mistakes & misconfigurations

- VPN configuration weaknesses
- Exposed SVN/git repositories
- Unsupported operating systems
- Open mail relays
- DNS servers allowing zone transfer

As a **Pro** plan customer, you also have access to:

Emerging threats

The time between new vulnerabilities emerging and hackers exploiting them is now days, not weeks. For organizations who need a more mature approach to cyber security, our emerging threat scans detect critical threats to your systems without waiting for the next monthly check.

Internal checks

Your internal systems can also be hacked with a little extra effort, e.g. by an email or web page link that exploits known unpatched software or an employee's device. Our agent-based scanner can be installed on each machine you want to protect.

Scan Info

Targets included in this scan

[REDACTED]

Scan timings

This scan ran from 2024-01-13 22:00:25 UTC to 2024-01-13 22:36:18 UTC.

About us

Company

Intruder Systems Ltd is an independent security advisory company, specialising in providing continuous security monitoring for internet-facing web applications and infrastructure.

Credentials

Intruder is a member of CREST

Intruder is a CREST accredited Vulnerability Assessment service

Monitored by Drata for SOC 2 compliance

Intruder is a member of the Cyber-security Information Sharing Partnership

Intruder is Cyber Essentials certified.

Cyber Accelerator Alumni

Security Team

Our consultants have delivered work for government agencies, international financial institutions, and global retail giants.

Compliance

Our reports are ISO 27001 and SOC 2 compliance ready.
